How to check your spots:

1. Examine your skin front and back in mirror, then right and left sides, arms raised.
2. Bend elbows, look carefully at forearms, back of upper arms, and palms.
3. Look at backs of legs and feet, spaces between toes, and soles.
4. Examine back of neck and scalp with a hand mirror. Part hair and lift.
5. Finally, check back and buttocks with a hand mirror.

The ABCDEs of Melanoma

Skin cancer can develop anywhere on the skin. Ask someone for help when checking your skin, especially in hard to see places. If you notice a mole that is different from others, or that changes, itches or bleeds (even if it is small), you should see a dermatologist.

- **Asymmetrical** (A): One half unlike the other half.
- **Border** (B): Irregular, scalloped or poorly defined border.
- **Color** (C): Varied from one area to another; shades of tan and brown, black; sometimes white, red or blue.
- **Diameter/Size** (D): While melanomas are usually greater than 6mm (the size of a pencil eraser) when diagnosed, they can be smaller.
- **Evolving** (E): A mole or skin lesion that looks different from the rest or is changing in size, shape or color.

**EXAMPLE:**

Be Sun Smart ℠: Protect Yourself From the Sun

Sun exposure is the most preventable risk factor for all skin cancers, including melanoma. You can have fun in the sun and decrease your risk of skin cancer.

Here’s how to Be Sun Smart ℠:

• **Generously apply a water-resistant sunscreen** with a Sun Protection Factor (SPF) of at least 15 that provides broad-spectrum protection from both ultraviolet A (UVA) and ultraviolet B (UVB) rays to all exposed skin. Re-apply every two hours, even on cloudy days, and after swimming or sweating. Look for the AAD SEAL OF RECOGNITION® on products that meet these criteria.

• **Wear protective clothing**, such as a long-sleeved shirt, pants, a wide-brimmed hat and sunglasses, where possible.

• **Seek shade** when appropriate, remembering that the sun’s rays are strongest between 10 a.m. and 4 p.m. If your shadow is shorter than you are, seek shade.

• **Protect children** from sun exposure by playing in the shade, wearing protective clothing and applying sunscreen.

• **Use extra caution near water, snow and sand** as they reflect the damaging rays of the sun, which can increase your chance of sunburn.

• **Get vitamin D safely** through a healthy diet that may include vitamin supplements. Don’t seek the sun.

• **Avoid tanning beds**. Ultraviolet light from the sun and tanning beds can cause skin cancer and wrinkling. If you want to look like you’ve been in the sun, consider using a sunless self-tanning product, but continue to use sunscreen with it.

• **Check your birthday suit on your birthday**. If you notice anything changing, growing or bleeding on your skin, see a dermatologist. Skin cancer is very treatable when caught early.

If you have any doubt about a mole, find a dermatologist at www.aad.org. The five-year survival rate for people whose melanoma is detected and treated before it spreads to the lymph nodes is 99%, so be sure to check your skin regularly.
